

Latvian National Opera, Riga

2013

Trekwerk offered and won the tender of the control system renovation on the existing overstage installation of the theatre's line set winches, stage revolve, three orchestrapit lifts and stage tilting installation by installing the TNM operating system. New inverters on each axe and a 600v regenerative DC busbar power system were installed. The old battens were replaced for new double trusses to make higher point loads possible.

Implemented Products

TNM Control System
Regenerative Power Distribution
