

## Barbican Theatre, London

2013

Trekwerk engineered, manufactured and installed the machinery and technique for the renovation of the Barbican Theatre. The entire grid floor was replaced by a lamel type grid. Steel cables were hidden in the floor creating a clean and workable grid. All galleries were modified to improve the length of the fly bars. The new SynchroDisk (with a special wider drum) and SynchroPoint winches and chain hoists are all controlled by the SIL3 certified TNM control and powered by 600v regenerative system.

### Implemented Products

SynchroDisk Special Width, SynchroPoints  
TNM Control System  
Regenerative Power Distribution

### Venue Info

Barbican Theatre, Silk St, London

### Realisation

Award October 2012, Start Installation May 2013  
Hand Over September 2013
